

Sustainability Facility Professional™ (SFP™) Credential:

Advance your sustainable FM skills.

Earning the SFP will arm you with the knowledge to challenge yourself and your organization to go beyond your current sustainable practices. You'll learn how to integrate sustainability programs with your organization's values and strategies, present a business case for a sustainability initiative, and evaluate your efforts from a financial point of view.

The SFP credential will enable you to recognize how and where to implement best practices that will impact your organization's economic, environmental and social bottom lines, saving money and valuable resources.

The IFMA SFP Credential Program™ provides you with practical instruction to enhance your sustainable FM skills and the tools to earn the SFP credential in one complete program! This convenient system combines learning modules available in print or electronic formats, interactive online study tools and final SFP assessments.

Live instructor-led programs and corporate training options are also available.

“The SFP program provided the education and tools necessary to meet the challenges of implementing and advancing a sustainable FM program. It also put the importance of sustainable operations in progressive organizations into perspective and demonstrated that the very survival of some organizations depends on it.”

John Marhong, C.E.T., SFP
Director of Infrastructure and Energy Efficiency
Woodbine Entertainment Group,
Largest Race Track in Canada

Make a powerful impact on the triple bottom line with the SFP credential.
